MRI PELVIS - RECTAL CANCER STAGING PROTOCOL

Patient:	**Mr. R. V. SHETTY**	MRI No.:	**KSC/MR/26/0091**
Age / Sex:	59 / M	Date:	**14-01-2026**
Referred by:	Dr. Harish Bhandary (Surgical Oncology)	Scanner:	3 T; small-FOV T2, DWI, post-contrast

Clinical details: Colonoscopy (07/01/2026): rectal growth 6 - 11 cm from the anal verge, biopsies taken; HPE awaited.

Findings

- Tumour: semi-annular (about 270 degrees) mid-rectal tumour, lower edge 6.2 cm from the anal verge and 3.1 cm above the anorectal junction; craniocaudal length 5.4 cm.
- Depth: extramural spread of 9 mm at the 3 - 5 o'clock position. Mesorectal fascia (MRF): tumour lies 1 mm from the left lateral MRF.
- EMVI: positive (tumour-expanded vein at the 4 o'clock position).
- Nodes: four mesorectal nodes with irregular borders and mixed signal, largest 8 mm. No lateral pelvic sidewall nodes.
- Tumour lies below the peritoneal reflection. Bladder, seminal vesicles and prostate free. No pelvic bony lesion.

Impression

Mid-rectal carcinoma, mrT3c N2a, EMVI positive, MRF threatened (1 mm, left lateral); lower edge 6.2 cm from the anal verge.
