MEDICAL ONCOLOGY OPD - CASE RECORD

Field	Details
Date	**16/07/2026**
Patient	**Amit Kumar Munda, 22 Y / M, UHID SCH/26/11902**
Seen by	Dr. Sweta Hembrom (Medical Oncology)
Referred by	Dr. Prashant Tirkey (Surgical Oncology)
Complaints	Post right high inguinal orchidectomy; dry cough x 1 month; no breathlessness or back pain
Past history	Right orchidopexy in childhood. Non-smoker, no alcohol. No co-morbidity.
Examination	ECOG 0. Healed right inguinal scar. Vague epigastric fullness; no supraclavicular nodes; no gynaecomastia. Chest clear.

Investigations

Date	Investigation	Result
29/06/2026	USG scrotum	Right testicular solid-cystic mass 4.8 cm
01/07/2026	AFP / beta-hCG / LDH (pre-op)	1,240 ng/mL / 3,850 mIU/mL / 610 U/L
10/07/2026	HPE (orchidectomy)	Mixed GCT (EC 60 %, YST 30 %, teratoma 10 %), LVI present, cord margin free
14/07/2026	CECT chest, abdomen and pelvis	Interaortocaval and left para-aortic nodal mass 4.2 x 3.5 cm; three lung nodules, largest 1.4 cm; no liver or bone lesions
15/07/2026	AFP / beta-hCG / LDH (post-op)	1,020 ng/mL / 1,960 mIU/mL / 540 U/L

Assessment: Non-seminomatous germ cell tumour, right testis, stage IIIB (pT2 N2 M1a S2); IGCCCG intermediate prognosis.

Plan

- BEP x 4 cycles (bleomycin, etoposide, cisplatin; 5-day schedule every 21 days). Cycle 1 to start on 20/07/2026 in Day-Care.
- Baseline PFT with DLCO, audiometry, RFT and creatinine clearance before chemotherapy.
- Semen cryopreservation already done.
- Markers before every cycle; CECT after 4 cycles; RPLND if a residual mass of more than 1 cm.
