RADIOTHERAPY SUMMARY

Palliative external beam radiotherapy

Name: Devi Ram Chauhan Age / Sex: 72 / M RT No.: HRO/26/0157 Date: 22/05/2026

Diagnosis: Adenocarcinoma prostate, Gleason 4 + 4, high-volume metastatic hormone-sensitive disease; on androgen deprivation since April 2026.

Indication: Painful L2 - L3 vertebral metastases. MRI dorsolumbar spine (10/05/2026): L2 and L3 metastases with a small soft-tissue component; no cord compression, no collapse.

PSA: 9.2 ng/mL on 15/05/2026 (86.4 ng/mL at diagnosis).

Treatment

Parameter	Details
Site	L1 to L4 vertebrae (one vertebra above and below the involved levels, 1 cm lateral margin)
Technique	3D-CRT, AP-PA parallel opposed fields, 6 MV photons
Dose	20 Gy in 5 fractions, 4 Gy per fraction
Dates	18/05/2026 - 22/05/2026
Interruptions	None

Response and toxicity

Pain score fell from 7/10 to 3/10 by the last fraction; morphine requirement halved. Grade 1 nausea managed with ondansetron. No diarrhoea.

Advice

- Continue androgen deprivation as per the urologist; next leuprolide depot due in July 2026.
- Tab. Morphine (immediate release) 10 mg SOS as per the pain clinic, with a laxative while on morphine.
- Review in RT OPD after 4 weeks; come earlier for weakness of the legs or difficulty passing urine.
