PROCEDURE NOTE

Patient: Smt. Bimala Devi Sahu, 54 Y / F, IP no. IMH/26/07018

Date of procedure: 12.05.2026

Procedure: Insertion of a totally implantable venous access port, right internal jugular vein, under ultrasound and fluoroscopic guidance

Operator: Dr. Prakash Medhi (Interventional Radiology)

Anaesthesia: Local anaesthesia with minimal sedation

Indication: Long-term chemotherapy access

Technique

Under aseptic precautions the right internal jugular vein was punctured with ultrasound guidance. The catheter tip was positioned at the cavo-atrial junction under fluoroscopy. The port chamber was placed in a subcutaneous pocket in the right infraclavicular region and tested; aspiration and flushing were satisfactory. The skin was closed with subcuticular sutures.

Complications and aftercare

None. Post-procedure chest radiograph is to be done to exclude pneumothorax. The port can be accessed from tomorrow. Keep the dressing dry for 7 days.
