CT SCAN - ABDOMEN & PELVIS (CONTRAST ENHANCED)

Patient: Mrs. GEETA R. KULKARNI

Age / Sex: 57 Y / F

Study date: 03-Feb-26

Ref. by: Dr. Mukta Bhalerao, Nirmalya Institute of Medical Sciences

Clinical history: Abdominal distension and pelvic discomfort for two months; CA-125 raised.

Findings

- A large heterogeneously enhancing solid-cystic mass is seen in the pelvis, appearing to arise from the right adnexa, measuring about 9.8 x 8.2 cm.
- Moderate ascites. Omental thickening is present in the infracolic compartment.
- No hydronephrosis. Liver, spleen, pancreas and both kidneys are unremarkable.
- No enlarged retroperitoneal lymph nodes by size criteria.

Impression

Right adnexal solid-cystic pelvic mass with ascites and omental thickening. Surgical and histopathological correlation advised.
