SURGICAL PATHOLOGY REPORT

Name:	**GEETA RAMESH KULKARNI**	Lab No.:	**SP-26-1187**
Age / Gender:	57 / F	Received on:	19.02.2026
Clinician:	Dr. Mukta Bhalerao (Gynaec. Oncology)	Date of report:	**27th February 2026**
Specimen:	Uterus with both adnexa and omentum	History:	TAH with BSO and omentectomy performed on 18/02/2026 for a pelvic mass

Gross

Uterus with cervix, 9 x 6 x 4 cm, and both tubes and ovaries. The right ovary is replaced by a 9 cm solid-cystic mass with papillary excrescences. Omentum 18 x 12 cm with scattered nodules up to 1.2 cm.

Microscopy

Sections from the right ovarian mass show a malignant epithelial neoplasm with papillary and solid architecture, marked nuclear atypia and brisk mitoses. Tumour deposits are present in the omentum. The uterus, cervix, left ovary and both tubes show no tumour.

Final diagnosis

Right ovary: HIGH-GRADE SEROUS CARCINOMA. Omentum: involved by metastatic carcinoma. Uterus, cervix, left adnexa: free of tumour.

Immunohistochemistry (PAX8, WT1, p53) will be reported separately.
