FDG PET-CT - WHOLE BODY

Patient:	**Mr. JOSEPH THOMAS KURIAN**	PET no.:	VNI/26/0112
Age / Sex:	65 Y / M	Date of study:	**19th January 2026**
Referred by:	Dr. T. K. Menon	Indication:	Cervical lymphadenopathy, work-up

Findings

- FDG-avid conglomerate lymph nodal masses in the left cervical (levels II to V) and supraclavicular regions.
- FDG-avid nodes in the mediastinum and the para-aortic region. Spleen shows a focal avid lesion.
- No FDG-avid lesion in the lungs or the skeleton. Bone marrow uptake is normal.

Impression

Multiple FDG-avid nodal and splenic lesions as described, in keeping with the clinical suspicion of lymphoma. Tissue diagnosis is required.
