HISTOPATHOLOGY REPORT - CERVIX (PUNCH BIOPSY)

Patient:	**Mrs. RITU AGRAWAL**	Lab no.:	**BO/26/6120**
Age / Sex:	46 Yrs / F	Reported on:	**20/05/2026**
Sent by:	Dr. Neelam Khandelwal	Collected:	16/05/2026
Clinical details:	Post-coital bleeding; growth on the cervix	Sample:	Cervix, 4 punch biopsies

Microscopic examination

The sections show fragments of cervix with an infiltrating malignant neoplasm composed of nests and sheets of squamous cells with keratinisation and intercellular bridges. The overlying epithelium shows high-grade squamous intraepithelial change. Stromal invasion is present.

Impression

Cervix, punch biopsy: INVASIVE SQUAMOUS CELL CARCINOMA, moderately differentiated.
