DISCHARGE SUMMARY

Name: Mrs. Ritu Agarwal Age / Sex: 46 / F IPD: SMC/26/09021

Consultant: Dr. Neelam Khandelwal, Gynaecologic Oncology

Summary

Mrs. Agarwal, a patient of carcinoma of the cervix on concurrent chemoradiation, was admitted on 25th June 2026 with vomiting, loose stools and poor oral intake for three days, and was discharged on 28th June 2026 in a stable condition.

On admission she was mildly dehydrated, with a pulse of 104/min and BP 98/62 mmHg. Serum electrolytes showed a low potassium level which was corrected. She received intravenous fluids, anti-emetics and potassium replacement. An ultrasound of the abdomen done on 26/06/2026 did not show any collection or bowel dilatation. Her symptoms settled by the third day and she tolerated a soft diet. The radiotherapy schedule was not interrupted.

Advice on discharge

Medicine	How to take	Days
Tab. Ondansetron 4 mg	Twice a day, before food	5
Tab. Pantoprazole 40 mg	Once in the morning, empty stomach	10
Tab. Loperamide 2 mg	After each loose stool (max 4 / day)	3
ORS sachets	One sachet in a litre of water, sip through the day	5

Take plenty of fluids and a soft diet. Come to the day-care unit or casualty for fever, bleeding, or if vomiting recurs. Review in OPD on 01/07/2026.
