CONSULTATION NOTE - HEAD & NECK ONCOLOGY OPD

Patient: Mr. VIJAY R. PATIL

Age / Sex: 59 Y / Male

Date: 5th May 2026

Seen by: Dr. Sanjay Chouhan (ENT & Head-Neck Surgery)

Presenting problem

Non-healing ulcer on the left lateral border of the tongue for six weeks, painful on eating. Chews tobacco (gutkha) for 25 years. No difficulty in swallowing; no noticeable neck swelling.

Examination

2.5 x 1.5 cm indurated ulcer, left lateral border of the tongue, not crossing the midline. One firm, mobile level IB node on the left side, 1.2 cm. Trismus absent.

Assessment and advice

- Clinical suspicion of carcinoma of the oral tongue.
- Incisional biopsy under local anaesthesia and contrast CT neck to be arranged.
- Stop tobacco completely; dental clearance.
- Review with reports.
