OPERATIVE NOTE

Department of Head & Neck Surgical Oncology

Patient:	**Ramesh Pd. Yadav**	IPD No.:	**KCH/IPD/26/1960**
Age / Sex:	56 / M	Date:	**17.03.2026**
Surgeon:	Dr. Abhishek Ranjan Sinha	Anaesthesia:	GA via elective tracheostomy

Procedure: Left composite resection (wide excision of the buccal mucosa growth with segmental mandibulectomy) + left modified radical neck dissection (type I) + reconstruction with a left pectoralis major myocutaneous (PMMC) flap + tracheostomy

Findings

Growth 5 x 3.5 cm involving the left buccal mucosa and the lower gingivobuccal sulcus, eroding the outer cortex of the mandible in the 34 - 37 region; skin of the cheek free. Level IB node 2 cm; level II nodes sub-centimetric.

Steps

Tracheostomy under LA, followed by GA through the tracheostomy. Midline lip-split incision with a cervical (hockey-stick) extension. MRND type I preserving the spinal accessory nerve. Segmental mandibulectomy from the 33 region to the angle with a 1 cm bony margin; soft-tissue cuts 1.5 cm from the palpable tumour. Reconstruction with a left PMMC flap; neck closed over two suction drains. Ryle's tube in situ.

Specimen oriented with stitches (superior - short, anterior - long) and sent for HPE along with the neck levels in separate containers.

Blood loss about 500 mL; 1 unit PRBC transfused. Shifted to SICU on a T-piece with the tracheostomy tube in situ.

Dr. Abhishek Ranjan Sinha
